FX-Maxx Hideaway	<ul style="list-style-type: none"> » Equipped with convenient front panel cover

FEATURES AND BENEFITS

Technicold - the industry leader in marine climate systems - presents the optimal temperature control and monitoring systems: The FX Series of Digital Environmental Control Panels.

Utilizing a **user-friendly, highly intuitive menu**, the FX series has **up to 17 different function programs** that allow you to tailor your air conditioning system to your vessel's specific needs. Normal operation is a breeze - literally and figuratively - with a **single button to set the desired temperature**.

Technicold's FX control panels maintain cooling or heating while **automatically monitoring and self-diagnosing the climate control system**. The dehumidifying mode helps with environmental maintenance, ensuring a dry, odorless boat even while unattended. A touch button control panel provides a **clear visual image of the current temperature, programs, fault messages and other optional screens - fully customizable and programmable** from the factory prior to installation.

Technicold's FX control panels are designed for **ease of installation**. No complicated wiring is required - the display panel, power control module and temperature sensor all connect with a polarized plug connection similar to a telephone or internet cable.

The best built, best designed, and best backed marine systems in the industry are available from Technicold by Northern Lights.
