

Clean Power. Clear Air. Complete Comfort.

TECHNICOLD

Let's Clear The Air - Presenting Blue-V by Technicold

For the ultimate in clean air and complete comfort, put the proven anti-microbial power of UV light to work for you. Blue-V by Technicold is available as an option on Technicold draw-through or blow-through air handlers, 8000 - 32000 BTU.

Blue-V is a clean, economical safeguard against air borne contaminants. Blue-V's UV light inhibits mold and algae growth in the evaporator, blower housing and drain pan. Unlike the competition, which offers UV bulbs only in the ducting, Technicold installs Blue-V directly in the air handler; virtually eliminating all microbes. The musty smell and poor air quality associated with some on-board air conditioning systems are not a concern with Blue-V equipped Technicold products.

Like all Technicold-backed products, Blue-V is ingeniously simple, while built to thrive in the harsh marine environment. The climate solution experts at Technicold design the Blue-V installation that is best suited for your vessel's HVAC system. Installing Blue-V in the air handler saves valuable space without restricting your ducting options.

Choose the peace of mind that comes with owning the best - choose Technicold by Northern Lights.
