

# NORTHERN LIGHTS

TSC Start/Stop Panel: no. 37-90000, includes a switch and cable

TSC Control Panel

## TSC START/STOP REMOTE PANEL

### Start/Stop Remote Panel for Use with TSC Controls

Northern Lights is pleased to present the Marine TSC Start/Stop Remote Panel for use with TSC Controls.

The simple on/off feature and handy color codes of the TSC buttons make the TSC panel even more versatile and user friendly.

These buttons provide an easy start and stop function for remote applications. It can be used with any TSC panel equipped with a data-output plug, using a standard remote extension harness.

A series of different colored lights indicates the different stages of operation:

- A light blue color indicates the remote panel is powered on
- A dark blue color indicates the buttons are operational in Auto
- Green indicates the unit has started and will remain on until stopped
- A blinking amber color indicates a warning message from the main panel
- Red indicates a safety shutdown

Other benefits included are the IP67/IP69K waterproof rating and UV protection. The Start/Stop Remote Panel is guaranteed to keep dust out and sealed against water up to a depth of one meter for one hour. The UV protection makes it highly resistant to deterioration that can be caused by exposure to the sun.

Units are in stock for order.

**RELIABLE. DURABLE. SIMPLE.**
